MATTERPORT 360° FACILITY SCAN

A HIGH-RESOLUTION DIGITAL TWIN OF YOUR FACILITY, A MATTERPORT 360° FACILITY SCAN ALLOWS USERS TO “WALK THROUGH” YOUR FACILITY FROM ANYWHERE.

It provides an incredibly detailed 360° panorama of the entire area, with specific rooms and equipment labeled as needed.

Each label can be hyperlinked to important documentation, such as manufacturing instructions, maintenance logs, service manuals, and electrical or PID diagrams.

- Save time
- Reduce costs
- Improve performance

APPLICATIONS INCLUDE:

- **Equipment moves and capital expansion projects:** High-resolution documentation of equipment connections helps to avoid problems caused by incorrect/incomplete documentation
- **Asset documentation:** Asset location and condition details, including measurements accessed directly from the viewer
- **Workflow improvement:** A facility scan of the current state is invaluable for any Value Stream Mapping or 5S initiative
- **Employee training:** 3D facility mapping — with area, station, and equipment labels — allows efficient training for new employees with less disruption on the floor

We are excited about the recent completion of our facility scan, which has enabled us to pull measurements and incorporate them into planning and process documentation. Our upcoming 5S initiative will be greatly enhanced using this resource.

Rian True
CEO, Carolina CoverTech
and School Safety Solution

Our Matterport 3D Facility scan was instrumental in helping us streamline the manufacturing process and driving efficiency in our new location. I highly recommend it to anyone considering a facility relocation, waste elimination or efficiency project.
