

SUPPLY CHAIN MATURITY MODEL ASSESSMENT REPORT

The **SCMEP Supply Chain Maturity Model Assessment Report (SCM2)** offers a thorough evaluation of the maturity of your company's supply chain processes. It provides a comprehensive overview of your supply chain strengths, identifies opportunities for improvement, and delivers focused, strategic direction to improve supply chain performance. By building a dynamic supply chain system, you'll mitigate risks and increase overall competitiveness.

STEP 1: ONLINE QUESTIONNAIRE

A set of standardized questions is sent in advance to individuals in different leadership levels to capture diverse perspectives. There is no limit on the number of respondents.

THE QUESTIONNAIRE COVERS SIX FACETS OF SUPPLY CHAIN MATURITY:

- Strategy
- Performance and Cost Control
- Systems/Information Technology
- Supplier Management
- Collaboration, People, and Partnerships
- Transportation Management

STEP 2: ONSITE VISIT

SCMEP team members will visit your facility to discuss responses to the questions, the gaps identified, and dig deeper to understand your unique supply chain challenges.

STEP 3: REPORT DEVELOPMENT AND DELIVERY

Your SCMEP RVP compiles and delivers a detailed SCM2 assessment report, providing insights and actionable time-phased recommendations.

ASSESSMENT REPORT OUTPUT INCLUDES:

- **Current State Insights:** Insights highlighting the current state of your supply chain maturity based on both online responses and the onsite visit.
- **Scoring:** Online score output with graphical representations and comparison data across different management levels.
- **Recommendations:** Actionable recommendations to address potential areas of improvement, map a way forward, and increase your supply chain maturity.
